➤ *Limited Use & License Disclosure*

BY USE OF THIS PRODUCT, RESEARCHER AGREES TO BE BOUND BY THE FOLLOWING TERMS OF LIMITED USE OF THIS CELL LINE PRODUCT.

- If the researcher is not willing to accept the terms of limited use of this cell line product, and the product is unused, ACRO will accept return of the unused product.
- Researchers may use this product for research use only, no commercial use is allowed.
"Commercial use" means any and all uses of this product and derivatives by a party for profit or other consideration and may include but is not limited to use in: (1) product manufacture; and (2) to provide a service, information or data; and/or resale of the product or its derivatives, whether or not such product or derivatives are resold for use in research.
- This cell line is neither intended for any animal or human therapeutic purposes nor for any direct human in vivo use. You have no right to share, modify, transfer, distribute, sell, sublicense, or otherwise make the cell line available for use to other researchers, laboratories, research institutions, hospitals, universities, or service organizations.
- ACROBIOSYSTEMS MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND, EITHER EXPRESSED OR IMPLIED, WITH RESPECT TO THE SUITABILITY OF THE CELL LINE FOR ANY PARTICULAR USE.
- ACROBIOSYSTEMS ACCEPTS NO LIABILITY IN CONNECTION WITH THE HANDLING OR USE OF THE CELL LINE.
- Modifications of the cell line, transfer to a third party, or commercial use of the cell line may require a separate license and additional fees. Please contact order.cn@acrobiosystems.com for further details.

Jurkat/Human CD7 Knockout Stable Cell Line Data Sheet

Jurkat/Human CD7 Knockout Stable Cell Line Data Sheet

Catalog No.	Size
CJUR-STK329	2 × (1 vial contains ~5×10 ⁶ cells)

• *Description*

The Jurkat/Human CD7 Knockout Stable Cell Line was generated from Jurkat cells through targeted knockout of human CD7 (Gene ID: 924). The expression level of human CD7 was confirmed by flow cytometry. Mutated sequences of human CD7 produced by non-homologous end joining (NHEJ) were confirmed through genomic sequencing.

• *Application*

- Useful for cell-based CD7 target-specific analysis

• *Cell Line Profile*

Cell line	Jurkat/Human CD7 Knockout Stable Cell Line
Host Cell	Jurkat
Property	Suspension
Complete Growth Medium	RPMI 1640 + 10% FBS
Selection Marker	NA
Incubation	37°C with 5% CO ₂
Doubling Time	18-22 hours

Jurkat/Human CD7 Knockout Stable Cell Line Data Sheet

• *Materials Required for Cell Culture*

- RPMI Medium 1640 (Gibco, Cat. No. 11875-093)
- Fetal bovine serum (CellMax, Cat. No. SA211.02)
- Penicillin-Streptomycin (Gibco, Cat. No. 15140-122)
- Complete Growth Medium: RPMI-1640 + 10% FBS, 1%P/S
- Freeze Medium: 90% FBS, 10% (V/V) DMSO
- T-75 Culture flask (Corning, Cat. No. 430641)
- Cryogenic storage vials (SARSTEDT, Cat. No. 72.379.007)
- Thermostat water bath
- Centrifuge (Cence, Model: L550)
- Cell counter (MONWEI, Model: SmartCell200A Plus)
- CO₂ Incubator (Thermo, Model: 3111)
- Biological Safety Cabinet (Thermo, Model: 1389)

Jurkat/Human CD7 Knockout Stable Cell Line Data Sheet

• *Recovery*

1. Thaw the vial by gently agitating it in a 37°C water bath. To minimize the risk of contamination, ensure the cap remains out of the water. Thawing should be completed quickly, typically within 3-5 minutes.
2. After thawing, promptly remove the vial from the water bath and decontaminate it by spraying with 70% ethanol. From this point onward, all operations must be performed under strict aseptic conditions.
3. Transfer the contents of the vial to a centrifuge tube containing 4.0 mL of complete growth medium.
4. Count viable cells and centrifuge at approximately 1000 rpm for 5 minutes.
5. Discard the supernatant and resuspend the cell pellet in an appropriate amount of fresh **complete growth medium**. Adjust the cell density of the suspension to 1×10^6 viable cells/mL and transfer cells to an appropriate size vessel.
6. Incubate at 37°C with 5% CO₂ incubator.

• *Subculture*

Cell viability may be low after thawing, and full recovery (viability >90%) may take up to 1-2 weeks. Once the cell density reaches approximately 2×10^6 viable cells/mL, adjust the density to a range of 2×10^5 - 5×10^5 viable cells/mL by either adding the fresh **complete growth medium** or replacing the existing culture medium. Avoid allowing the cell density to exceed 3×10^6 cells/mL, as this may negatively impact cell performance in subsequent passages. T-75 flasks are recommended for subculturing.

• **Subculturing Frequency:** It is recommended to subculture every 3-4 days, adjusting the frequency based on the cell density in your specific culture system.

Jurkat/Human CD7 Knockout Stable Cell Line Data Sheet

• *Cryopreservation*

1. Count viable cells and harvest the cell suspension.
2. Centrifuge at 1000 rpm for 5 min at room temperature and resuspend cells in ice cold freezing medium to a concentration of 5×10^6 to 1×10^7 cells/mL.
3. Aliquot the cell suspension into cryogenic storage vials. Place the vials in a programmable cooler or an insulated box placed in a -80°C freezer overnight, then transfer to liquid nitrogen storage for long-term storage.

Note: It is recommended to establish a cell bank at the earliest possible passage for long-term use.

• *Storage*

Cells must be received in a frozen state on dry ice and should be transferred to liquid nitrogen or a -80°C freezer immediately upon receipt. If stored in a -80°C freezer, it is recommended to limit the storage period to no more than two weeks. For long-term preservation, transfer the cells to liquid nitrogen is highly recommended.

• Receptor Assay

Catalog No.	Stable Cell Line	MFI for CD7 (PE)
NA	Negative Control Cell	516.29
NA	Positive Control Cell	32357.81
CJUR-STK329	Jurkat/Human CD7 Knockout Stable Cell Line	219.11

Fig1. Expression analysis of human CD7 on Jurkat/Human CD7 Knockout Stable Cell Line by FACS. Cell surface staining was performed on Jurkat/Human CD7 Knockout Stable Cell Line using PE-labeled anti-human CD7 antibody. The Jurkat cells were stained with PE-labeled anti-human CD7 antibody as the positive control cell. The Jurkat cells were stained with PE-labeled isotype control antibody as the negative control cell.

• Sequencing Analysis

Fig2. Genomic Sequencing of human CD7 in the Jurkat/Human CD7 Knockout Stable Cell Line. Sanger sequencing was used for mutation analysis of human CD7. The sequencing results demonstrated that frameshift mutations were generated in the human CD7 gene in the Jurkat/Human CD7 Knockout Stable Cell Line.
